

INFORMATION

For sport suspension and self leveling systems the spring can only be used if specified in the model listing.

INFORMATION

Bei Sportfahrwerken und Niveauregulierungen ist die Verwendung nur möglich, wenn ausdrücklich für das jeweilige Pkw-Modell aufgeführt.

INFORMATION

Pour les suspensions de type sport et correcteur d'assiette, seuls les ressorts spécifiés dans le catalogue peuvent être utilisés.

INFORMAZIONI

Per Sospensioni Sportive e sistemi autolivellanti le molle possono essere utilizzate solo se elencate nella lista del modello.

INFORMACIÓN

Para suspensiones deportivas y con sistemas de nivelación automática los muelles solo pueden utilizarse si se especifica en el modelo.

Информация

Для спортивной подвески и подвески с системой регулировки клиренса пружины могут использоваться, только если они указаны в списке моделей.

INFORMACJA

Zastosowanie sprężyn w zawieszeniach sportowych i z automatyczną regulacją prześwitu tylko dla modeli ze wskazanym typem zawieszenia. (patrz opis modelu i zastosowanie).

INFORMACE

Pružiny pro sportovní zavěšení a zavěšení s nastavitelnou výškou mohou být užity jen podle specifikace modelu viz. katalog.

MANUFACTURING PROCESS

Hot and cold coiling technology is used to produce KYB K-Flex springs. A carefully controlled shot-peening process significantly increases the fatigue life of the coil spring. All K-Flex coil springs are phosphate coated prior to receiving an epoxy powder coating. This process guarantees a tough, durable finish with enhanced corrosion resistance properties.

HERSTELLUNGSVERFAHREN

Der Drahtstärke entsprechend werden die Federn kalt- oder heißgewickelt in Form gebracht. Die anschließende Kugelstrahlbehandlung sorgt für die höchste Festigkeit des Stahls und die Phosphatierung für einen optimalen Korrosionsschutz. Im letzten Arbeitsgang wird eine Epoxid-Pulverbeschichtung aufgebracht, für eine extrem haltbare, elastische und schützende Oberfläche.

PROCESS DE FABRICATION

La technologie chaud/froid qui est utilisée pour fabriquer les ressorts K-Flex est un process de fabrication spécifique contrôlé avec attention qui permet d'accroître les caractéristiques mécaniques du ressort. Tous les ressorts K-Flex sont traités au phosphate avant enduction du revêtement peinture époxy. Ce procédé garantit une finition durable et résistante à la corrosion.

PROCESSO DI FABBRICAZIONE

La produzione delle molle KYB K-Flex si avvale di tecnologie di avvolgimento a caldo o a freddo. Un accurato processo di pallinatura incrementa sensibilmente la resistenza a fatica della molla. Tutte le molle KYB K-Flex sono sottoposte a trattamento di fosfatazione prima di essere protette con vernice epossidica. Questo processo conferisce al prodotto finito una elevata resistenza e durata alla corrosione.

PROCESO DE FABRICACIÓN

Los muelles KYB K-Flex se fabrican utilizando tecnología térmica. Mediante un cuidadoso proceso de endurecimiento se incrementa la vida útil del muelle de suspensión. Todos los muelles K-Flex de KYB son fosfatados antes de recibir la capa de resina exposy. Este tratamiento garantiza una larga duración y una gran resistencia a la corrosión.

Процесс производства

При производстве пружин K-flex компании KYB используется технология холодной и горячей катки. Тщательно контролируемый процесс дробеструйной обработки значительно продлевает срок службы пружины. Все пружины K-flex сначала обрабатываются в растворе фосфорной кислоты, а затем покрываются эпоксидным порошком. Такая процедура гарантирует плотное долговечное покрытие с антикоррозийными свойствами.

PROCES PRODUKCYJNY

Sprężyny zwojowe KYB K-Flex powstają w procesie zwijania na gorąco oraz na zimno. Precyzyjnie kontrolowany proces kulowania śrutowego zwiększa wytrzymałość zmęczeniową sprężyny. Wszystkie sprężyny KYB K-Flex są fosforowane a następnie lakierowane proszkowo. Taki proces zabezpieczenia powierzchni gwarantuje wysoką twardość oraz odporność korozyjną materiału, z którego jest wykonana sprężyna.

BROKEN SPRINGS

Coil springs should always be fitted in axle pairs to ensure an even ride height and to avoid any pulling to one side when braking. Shock absorbers should be changed at the same time so that the vehicles suspension is restored to how the manufacturer intended.

DEFEKTE SCHRAUBENFEDERN

Schraubenfedern sollten immer paarweise getauscht werden, um eine gleichmäßige Höhe sicherzustellen und um ein seitwältiges Verziehen des Fahrzeuges beim Bremsen zu vermeiden. Die Stoßdämpfer sollten in diesem Fall ebenfalls gewechselt werden, um die vom Fahrzeughersteller vorgesehenen Fahrwerkssymmetrie wieder herzustellen.

RESSORTS CASSÉS

Les ressorts doivent toujours être changés par paire pour chaque essieu afin d'assurer une conduite stable et pour éviter que la voiture ne quitte sa trajectoire lors d'un freinage. Il est préconisé de changer tous les amortisseurs en même temps pour restaurer les propriétés d'origine de la suspension.

MOLLE DETERIORATE

Le molle devono essere sempre sostituite in coppia per asse, ciò assicura un' uniforme altezza del veicolo ed evita problemi di deriva in accelerata/frenata. Insieme alle molle è consigliabile anche la sostituzione degli ammortizzatori, in modo da ripristinare il corretto funzionamento della sospensione, nel rispetto dei parametri definiti dal Costruttore.

MUELLES ROTOS

Los muelles deben ser sustituidos siempre por parejas en un mismo eje para evitar diferencias de altura en la carrocería y posibles desviaciones del vehículo al frenar. Para conseguir una restauración total del sistema de suspensión deben ser sustituidos también los amortiguadores.

Поврежденные пружины

Пружины должны всегда устанавливаться попарно на ось с тем, чтобы гарантировать одинаковую высоту расположения кузова и избежать сдвига на бок при торможении. Одновременно с пружинами должны быть заменены и амортизаторы для того, чтобы подвеска соответствовала требованиям производителя.

PRAWIDŁOWY DOBÓR I WYMIANA SPREŻYN

Sprężyny zwojowe powinny być zawsze wymieniane parami, na osi, aby zapewnić równy prześwit i uniknąć przechylenia pojazdu na jedną ze stron przy hamowaniu. Wraz ze sprężynami powinny być wymieniane amortyzatory, aby parametry układu zawieszenia pozostały bez zmian w stosunku do wartości zaprojektowanych.

LINEAR

The term spring rate is used to describe the strength or stiffness of a spring. Spring rate is calculated by dividing the change in load applied to a spring by the resulting change in the spring's length. A spring which has constant stiffness is described as having a linear spring rate.

LINEAR

Der Begriff Federrate wird verwendet um die Stärke und die Festigkeit einer Feder zu definieren. Die Federrate stellt sich zusammen aus den Variablen: „Veränderung in der auf die Windungen wirkenden Kraft“ zur „Resultierenden Veränderung in der Länge“ der Feder. Eine Feder mit konstanter „Festigkeit“ wird als Feder mit einer „linearen Kennlinie“ bezeichnet.

LINÉAIRE

Le coefficient de raideur caractérise la dureté ou la souplesse d'un ressort. Ce coefficient est obtenu en divisant la variation de charge appliquée à un ressort par la différence de hauteur engendrée. Un coefficient de raideur constant caractérise un ressort dit « linéaire ».

LINEARI

Il termine flessibilità è usato per descrivere la forza o rigidità della molla. La flessibilità è calcolata dividendo la variazione di carico sulla molla per la corrispondente variazione di lunghezza della stessa. Una molla con flessibilità costante si definisce come a flessibilità lineare.

LINEAL

El término ratio es usado para definir la fuerza de un muelle. El ratio es calculado dividiendo la carga por la variación de longitud. Un muelle con fuerza constante se define como lineal.

ЛИНЕЙНАЯ

Термин «коэффициент жесткости пружины» используется для определения прочности или жесткости пружины. Данный коэффициент рассчитывается путем деления усилия, прикладываемого к пружине, на изменение ее длины. Пружина, у которой жесткость постоянна, имеет линейную жесткость.

SPRĘZYNA O LINIOWEJ CHARAKTERYSTYCE SZTYWNOŚCI

Charakterystyka sprężyny (sztywność sprężyny) określa zależność między obciążeniem a ugięciem sprężyny. Sztywność sprężyny oblicza się jako stosunek zmiany działającej na sprężynę siły do odpowiadającej jej zmiany długości sprężyny (N/mm). Dla sprężyn o liniowej charakterystyce sztywność sprężyny jest stała w całym zakresie pracy.

PROGRESSIVE

The term spring rate is used to describe the strength or stiffness of a spring. Spring rate is calculated by dividing the change in load applied to a spring by the resulting change in the spring's length. Progressive rate springs are those in which the spring stiffness increases the more the spring is compressed.

PROGRESSIV

Der Begriff Federrate wird verwendet um die Stärke und die Festigkeit einer Feder zu definieren. Die Federrate stellt sich zusammen aus den Variablen: „Veränderung in der auf die Windungen wirkenden Kraft“ zur „Resultierenden Veränderung in der Längem der Feder. Bei einer Feder mit progressiver Federrate erhöht sich die „Festigkeit“ der Feder, je mehr die Feder komprimiert wird.

PROGRESSIF

Le coefficient de raideur caractérise la dureté ou la souplesse d'un ressort. Ce coefficient est obtenu en divisant la variation de charge appliquée à un ressort par la différence de hauteur engendrée. Un ressort dit « progressif » se caractérise par un coefficient de raideur qui augmente au fur et à mesure que l'on comprime le ressort.

PROGRESSIVE

Il termine flessibilità è usato per descrivere la forza o rigidità della molla. La flessibilità è calcolata dividendo la variazione di carico sulla molla per la corrispondente variazione di lunghezza della stessa. Molle a flessibilità progressiva sono quelle in cui la rigidità si incrementa quanto più aumenta la compressione.

PROGRESIVO

El término ratio es usado para definir la fuerza de un muelle. El ratio es calculado dividiendo la carga por la variación de longitud. Un muelle progresivo es aquel cuya fuerza aumenta al aumentar la carga.

ПРОГРЕССИВНАЯ

Термин «коэффициент жесткости пружины» используется для определения прочности или жесткости пружины. Данный коэффициент рассчитывается путем деления усилия, прикладываемого к пружине, на изменение ее длины. Пружинами с переменной жесткостью называются такие пружины, у которых жесткость увеличивается по мере увеличения сжатия пружины.

SPRĘŻYNA O PROGRESYWNEJ CHARAKTERYSTYCE SZTYWNOŚCI

Charakterystyka sprężyny (sztywność sprężyny) określa zależność między obciążeniem a ugięciem sprężyny. Sztywność sprężyny oblicza się jako stosunek zmiany działającej na sprężynę siły do odpowiadającej jej zmiany długości sprężyny (N/mm). Dla sprężyn o progresywnej charakterystyce sztywność sprężyny rośnie wraz ze wzrostem ugięcia sprężyny.

SIDE LOAD SPRING

Side load (or m bananam) springs are curved and when compressed exert a side force on the shock absorber seat which reduces the friction between the shock absorber piston rod and the seal. This not only improves shock absorber response but also extends shock absorber life.

SEITENKRAFT - FEDER

Seitenkraft - (oder „Bananenm“) Federn sind gekrümmmt und entwickeln bei Kompression eine Seitenkraft auf den Stoßdämpfer, welche die Reibung auf Kolbenstange und die Dichtung stark reduziert. Diese Funktion verbessert das Ansprechverhalten des Schwingungsdämpfers und erhöht die Lebensdauer des Dämpfers.

RESSORT À CHARGE LATÉRALE

Le ressort à charge latérale ou « banane » a une forme incurvée ce qui permet lors de sa compression d'exercer une force latérale sur l'amortisseur afin de réduire les frictions entre la tige et les joints. Ceci a pour effet d'augmenter la durée de vie de l'amortisseur et d'améliorer ses temps de réponses.

MOLLE A CARICO LATERALE

Le molle a carico laterale (o banana) sono curve e quando sono compresse esercitano una forza laterale sul piattello appoggio molla che riduce l'attrito tra lo stelo e la tenuta olio. Questo non solo migliora la risposta dell'ammortizzatore ma ne aumenta anche la durata.

MUELLE DE CARGA LATERAL (BANANA)

Son muelles diseñados para que el amortiguador sufra menos esfuerzos axiales entre vástago y retén. Este diseño mejora el comportamiento del amortiguador y prolonga su vida útil.

ПРУЖИНА С БОКОВОЙ НАГРУЗКОЙ

Пружины с боковой нагрузкой (такой вид пружины еще называют «Банан») изогнуты и при сжатии оказывают боковое усилие на чашку амортизатора, что в свою очередь уменьшает трение между штоком амортизатора и сальником. Это не только улучшает характеристики амортизатора, но и также продлевает срок службы амортизатора

SPRĘŻYNY TYPU „SIDE LOAD”

Sprężyny typu „Side Load“ (o kształcie zbliżonym do banana) mają specjalny kształt umożliwiający kompensację obciążień bocznych działających na kolumnę MacPhersona podczas ugięcia. Taka konstrukcja sprężyn redukuje tarcie pomiędzy tłoczykiem amortyzatora a uszczelniaczem przez co poprawia skuteczność tłumienia drgań oraz wydłuża trwałość amortyzatora.

MINIBLOCK SPRING

The taper wire miniblock spring has a barrel shape and combines compact dimensions with a progressive spring rate. This progressive rate ensures a very comfortable ride under all conditions. The miniblock spring is identified in the catalogue as the part which is underlined.

MINIBLOCK-FEDER

Die Miniblock - Feder hat ein tonnenförmiges Erscheinungsbild, und vereinigt eine sehr kompakte Bauweise mit einer progressiven Federrate. Diese progressive Federrate erzeugt ein sehr komfortables und extrem stabiles Fahrverhalten unter allen Fahrbedingungen. Die Miniblock - Feder ist in diesem Katalog schnell anhand der unterstrichenen Artikelnummer zu identifizieren.

RESSORT „MINIBLOCKM“

Le ressort « Taper Wire miniblock » possède une forme de tonneau lui permettant de combiner un encombrement minimum avec une raideur progressive. Ces caractéristiques assurent une tenue de route et un confort de conduite en toutes circonstances. Les références soulignées dans le catalogue correspondent à la gamme « miniblock ».

MOLLE MINIBLOCK

La molla Miniblock a filo rastremato ha una forma a botte e combina dimensioni compatte e flessibilità progressiva. Questa progressività assicura una guida confortevole in tutte le condizioni. La molla Miniblock è identificata nel catalogo con il codice sottolineato.

MUELLE TIPO MINIBLOCK

El muelle Miniblock tiene forma de barril. Es un tipo de muelle compacto y progresivo al estar fabricado con hilo variable. Este tipo de hilo proporciona una conducción confortable en cualquier situación. Las referencias de muelles Miniblock en el catálogo son las que aparecen subrayadas.

МИНИБЛОК

Пружина «Миниблок» имеет бочковидную форму. Для производства такой пружины используется стальной пруток с переменным диаметром сечения для того, чтобы совместить компактные размеры и с прогрессивным коэффициентом жесткости. Данные конструктивные особенности гарантируют комфортную езду при любых условиях вождения. Номер пружины типа «Миниблок» отличается подчеркиванием.

SPRĘŻYNA TYPU „MINIBLOCK”

Sprężyna typu "Miniblock" posiada charakterystyczny kształt baryłki – średnica zwojów zmniejsza się na końcach sprężyny. Wykonana jest z drutu o zmiennej średnicy w celu połączenia niewielkich wymiarów z progresywną charakterystyką. Dzięki takiej konstrukcji, podczas ugięcia kolejne zwoje sprężyny nie stykają się ze sobą gwarantując bezgłośną pracę oraz zapewniając odpowiedni komfort jazdy we wszystkich warunkach na drodze. W katalogu zastosowań sprężyny typu "Miniblock" zostały oznaczone przez podkreślenie numeru referencyjnego.

KYB Shock Absorbers restore your vehicles handling

KYB has 5 ranges of shock absorbers which are all made to OE quality. Shock absorbers are often only changed when they are completely failed, however, they wear gradually over time and by 80,000km will no longer be functioning as well they should, therefore KYB recommend replacing them as a maintenance item in order to restore the handling of the vehicle to the way the manufacturer intended.

KYB Stoßdämpfer erneuern Fahrverhalten & Fahrsicherheit

KYB produziert und vertreibt 5 unterschiedliche Stoßdämpferbaureihen welche alle in absoluter OE - Qualität hergestellt werden. Stoßdämpfer werden meistens erst dann ausgetauscht wenn sie völlig defekt sind, anstatt diese spätestens ab 80.000 KM einer genaueren Prüfung zu unterziehen. Denn ab dieser Laufleistung von 80.000 KM ist ein deutlicher Verschleiß vorhanden und die hundertprozentige Funktion eingeschränkt. KYB empfiehlt daher die Stoßdämpfer im Rahmen der regelmäßigen Inspektionen zu prüfen und falls notwendig dann auch austauschen zu lassen, um das ursprüngliche Fahrverhalten und die Fahrsicherheit wie im Neuzustand wieder herzustellen.

Amortyzatory KYB a bezpieczeństwo

KYB posiada szeroką ofertę amortyzatorów produkowanych przy wykorzystaniu tej samej technologii i systemów kontroli jakości, co amortyzatory montowane jako oryginalne wyposażenie fabryczne (OE). W wielu przypadkach decyzja o wymianie następuje dopiero w momencie uszkodzenia, natomiast amortyzatory przestają prawidłowo funkcjonować po przebiegu 60 000 - 80 000 km, co negatywnie wpływa na bezpieczeństwo i komfort jazdy. Specjalisci KYB zalecają kontrolę stanu amortyzatorów co 20 000 km oraz wymianę w przypadku utraty sprawności w celu przywrócenia zaprojektowanych parametrów technicznych.

Protection and Security

KYB Original Protection Kit prevents dust and moisture from damaging the piston rod surface and rod seal.

It's only a matter of time until your struts show signs of corrosion. The piston rod is exposed to all outdoor effects.

By irregular maintenance and permanent exposure, this can lead to serious effects in the performance and safety. Reduce this risk with the new KYB protection kits. This special quality design tightly fits around the exposed parts of the rod and seal perfectly, to prevent damage. Easy installation and original KYB quality guarantee a special benefit for road handling and strut durability.

KYB Original Protection Kit beugt Schäden an Federbein und Simmerring durch Staub und Feuchtigkeit vor.

Est ist nur eine Frage der Zeit, bis Ihre Dämpfer Korrosionsschäden aufweisen.

Das Federbein ist allen Witterungen ausgesetzt. Durch unregelmäßige Wartung und permanente Schutzlosigkeit können ernste Beanspruchungen der Leistung und Sicherheit auftreten. Reduzieren Sie dieses Risiko mit den neuen KYB Protection Kits. Das spezielle Qualitätsdesign verschließt perfekt die ungeschützten Teile von Federbein und Simmerring und verhindert somit Schäden. Der einfache Einbau und die original KYB Qualität garantieren eine bessere Straßenlage und längere Lebensdauer der Dämpfer.

Oryginalne zestawy osłon KYB PK chronią powierzchnię oraz uszczelnienie tłoczyka przed uszkodzeniami spowodowanymi zanieczyszczeniami i wilgocią.

Powierzchnia tłoczyka jest nieustannie narażona na działanie czynników zewnętrznych. To tylko kwestia czasu kiedy na amortyzatorze pojawią się oznaki korozji.

Nieregularna obsługa serwisowa oraz ciągły wpływ zewnętrznych czynników atmosferycznych może w poważny sposób wpływać na przyspieszone zużycie amortyzatorów i bezpieczeństwo jazdy. Zastosowanie nowych zestawów osłon KYB PK eliminuje takie ryzyko. Specjalnie zaprojektowane, wykonane z materiałów wysokiej jakości osłony KYB PK chronią uszczelnienie i powierzchnię tłoczyka zapobiegając uszkodzeniu amortyzatora. Łatwość montażu i najwyższa jakość oryginalnych produktów KYB gwarantują wydłużony okres bezawaryjnej pracy amortyzatora zapewniając bezpieczeństwo na drodze.

Suspension Mounting Kit

KYB Suspension Mounting Kit improves the link between the shock absorber and the chassis.

Suspension mounting kits are exposed to mechanical stress and the elements.

If you change your suspension mounting kit at the same time as your shock absorbers, you will be sure of:

- Improved ride control
- Smooth and precise steering
- Reduced vibration
- Increased durability of the strut

KYB Suspension Mounting Kits are an indispensable complement to shock absorbers. Comfort, safety and improved suspension performance are guaranteed.

Der KYB Mounting kit optimiert das Zusammenwirken zwischen Stoßdämpfer und Chassis.

Die Befestigungen der Aufhängung sind mechanischer Beanspruchung sowie Umwelteinflüssen ausgesetzt.

Wenn Sie ihr Mounting Kit zusammen mit den Stoßdämpfern auswechseln, können Sie sicher sein, dass:

- sich die Straßenlage verbessert
- das Lenken leicht und präzise ist
- die Vibrationen reduziert werden
- die Langlebigkeit der Stütze/Strebe verbessert wird.

KYB Mounting Kit ist eine unverzichtbare Ergänzung für Stoßdämpfer. Komfort, Sicherheit und ein verbessertes Fahrwerk sind garantiert.

Zestawy montażowe KYB SMK zapewniają prawidłową pracę amortyzatora w miejscu mocowania do nadwozia oraz wpływają na trwałość innych elementów zawieszenia.

Elementy zawieszenia wchodzące w skład zestawów montażowych narażone są na znaczne obciążenia i uszkodzenia mechaniczne.

Wymiana elementów zawieszenia wchodzących w skład zestawów montażowych KYB SMK podczas instalacji nowych amortyzatorów wpływa na:

- poprawę jakości prowadzenia pojazdu
- precyzyjne sterowanie pojazdem w zakrętach
- ograniczenie drgań i wibracji w układzie zawieszenia i kierowniczym
- wydłużenie żywotności amortyzatora.

Zestawy montażowe KYB SMK powinny być stosowane zawsze, jeżeli występuje taka konieczność, podczas wymiany amortyzatora. Gwarantują bezpieczną, prawidłową pracę całego układu zawieszenia.

Comfort and improved road handling

KYB K-Flex
coil springs provide
comfort and improved
road holding.

KYB K-Flex
Schraubenfedern
bieten höheren Komfort
und bessere
Fahrsicherheit.

Sprężyny zwojowe KYB
K-Flex gwarantują
komfort jazdy i lepszą
przyczepność.

It is recommended that coil springs are changed after 4 years or 80.000 km, as they are subject to several external forces which can deteriorate performance. Chipping from stones, combined with salt from the road can often lead to ride height changes, which can in turn result in reduced performance and safety.

PKW- Schraubenfedern sollten jährlich auf ihren Zustand überprüft werden - und spätestens nach 4 Jahren oder ab 80.000 Kilometer ausgetauscht werden. Die permanente mechanische Belastung, Steinschlag, Streusalz und sämtliche Witterungseinflüsse führen über Jahre zu Verschleisserscheinungen und erheblicher Materialermüdung. Die unangeneham Folgen sind Leistungsverluste und Sicherheitseinbußen, und können bis zu einer verringerten Fahrzeughöhe gehen.

Sprężyny zawieszenia powinny być wymieniane co 4 lata lub 80 000 km ze względu na wpływ czynników zewnętrznych obniżających ich sprawność. Odpryski powstałe na skutek uderzeń kamieni w połączeniu z oddziaływaniem soli często prowadzą do zmiany parametrów wysokości zawieszenia obniżając komfort jazdy oraz bezpieczeństwo użytkowników pojazdu.

SPRING TYPES

AA

- Top Coil - Cropped
Obere Windung - angelegt
Spire supérieure - découpée
Zakończenie górnne - zwój przycięty, nieoszlifowany
- Bottom - Cropped
Untere Windung - eingerollt
Spire inférieure - découpée
Zakończenie dolne - zwój przycięty, nieoszlifowany

BC

- Top Coil - Ground
Obere Windung - geschliffen
Spire supérieure - rectifiée
Zakończenie górnne - zwój przycięty, oszlifowany
- Bottom Coil - Pigtail
Untere Windung - eingerolltes Ende
Spire inférieure - extrémíté enroulé
Zakończenie dolne - typu „pigtail” o zmniejszonej średnicy zwojów końcowych

AB

- One End - Cropped
Eine Windung - angelegt
Un côté - découpé
Zakończenie górnne - zwój przycięty
- One End - Ground
Eine Windung - geschliffen
Un côté - rectifié
Zakończenie dolne - zwój przycięty, oszlifowany

E

- Type E
Top Coil - Pigtail
Obere Windung - eingerolltes Ende
Spire supérieure - extrémíté enroulée
Zakończenie górnne - „pigtail” o zmniejszonej średnicy zwojów końcowych
- Bottom Coil - Pigtail
Untere Windung - eingerolltes Ende
Spire inférieure - extrémíté enroulée
Zakończenie dolne - typu „pigtail” o zmniejszonej średnicy zwojów końcowych

AC

- One End - Cropped
Eine Windung - angelegt
Un côté - découpé
Zakończenie górnne - zwój przycięty
- One End - Pigtail
Eine Windung - eingerolltes Ende
Un côté rectifié - extrémíté enroulée
Zakończenie dolne - typu „pigtail” o zmniejszonej średnicy zwojów końcowych

F
